Eco-Friendly Practices: Confronting Challenges

According to the United Nations World Tourism Organization, hotels are accountable for 1% of global emissions. This number will continue to rise as development increases, which is why sustainability initiatives are so important. It's also a primary consideration for ecologically-minded travelers. According to Booking.com's 2019 Sustainable Travel Report, 70% of global travelers say they would be more likely to book an accommodation knowing it was eco-friendly. Given these priorities, hotels are tasked with confronting a myriad of challenges. For example, water scarcity is a global issue that affects more than 40% of the world's population. On average, hotels use 400 gallons per room per day, so it is essential that efficient water stewardship programs are in place. Managed tourism is another issue hotels are addressing. In some areas, it is vital to curb rampant and uncontrolled tourism which is severely taxing local lands and resources. The May issue of the Hotel Business Review will report on what some hotels are doing to integrate sustainable, eco-friendly practices into their operations.

Editorial Deadline: **Wednesday, March 15, 2023**

Advertising Deadline: **Wednesday, April 19, 2023**

Run Date: **04/30/2023 - 06/03/2023**
